Ancient Wisdom Of Mysterious Bamboo Salt

Bamboo salt is considered a form of medicine used to combat disease, indigestion and pain. It was invented in the early 1900's by famed South Korean medicine man Dr. Kim Ilhoon. Dr Kim patented the lengthy 300 day process of creating this highly mineralized salt, an alkaline food.

The process of creating the most potent product (9x roasted) is begun by solarizing (drying) sea salt from the Yellow Sea, considered to be the highest mineralized on the planet. Salt is then packed in bamboo trunks and sealed with clay - now there are three sources of minerals. It is then kiln fired at 800C degrees for 8 hours - then this process is repeated 8 times and each time the salt is reduced to powder for repacking. The magic begins during the 9th kiln firing with pine resin at a temperature above 1300C. This process turns the salt into lava, which is poured into bowls to cool down, resulting in the salt becoming hard as stone.

This final process removes toxins, heavy metals and unwanted minerals, making it the cleanest and most bioavailable of all salts. The result is a food with an excellent ability to control concentration of electrolytes. You can consume 2 – 3 times more than regular salt and not feel thirsty. Why? The grid size of Bamboo Salt is 1/10th that of regular salts.

Consuming 1/2 tsp. per day has proven to support blood circulation, heart, blood pressure, detoxification, diabetes, skin issues, gum diseases, muscle cramps, osteoporosis, oxygenation and much more.
